

DRAFT

MEMORANDUM OF UNDERSTANDING

Between
Family Code Night
and
World Computer Exchange, Inc.

After both groups cooperated to conduct a successful online family coding event together, Family Code Night in California and World Computer Exchange (WCE) headquartered in Hull, Massachusetts are interested in working together to bring large scale online family coding events to Africa.

FUNDRAISING: Both parties are interested in seeking to raise funds to accomplish this. This may be done by either or jointly and may mention the role of the other as long as the donors, budget, and description of the roles are mutually agreed upon.

- Initially, both parties agree that a proposal(s) will be developed to seek funds to greatly expand the number of families participating in Africa.

OWNERSHIP: The products developed by either organization remain the property of the party that develops them. Either party may allow the other party to use their products with any conditions they wish to set. The respective logo will always remain on the product even when use is authorized by the other party.

- Initially, Family Code Night has temporarily allowed WCE to use and adapt the tape from the first Africa Family Code event and to distribute the "big ideas" flyer, the badge, and Code@Home pack. When WCE uses any of these they will cc John Pearce.

NEXT EVENTS: WCE is exploring the willingness of Ministers of Education in countries where WCE has Field Associates to see if they will promote an online family event in their respective country.

PUBLICITY: Both groups may post the name and logo of the other on their websites and include it in newsletters or marketing for common purposes. When exploring new areas, mutual agreement on new wording will be needed.

TERM: This understanding is initially entered into for one year. It may be extended for the same or longer periods of time upon written mutual agreement. Either group may terminate this understanding by giving three months written warning.

Date Signed: _____
